## *Executive Summary*

This report presents findings from a survey conducted among Alaska Bar Association members about the judicial performance of 21 retired pro tem judges. The 21 retired pro tem judges were (presented in alphabetical order): Eric A. Aarseth, Joel H. Bolger, William B. Carey, Robert L. Eastaugh, Dana Fabe, Natalie K. Finn, Donald D. Hopwood, Michael A. MacDonald, David Mannheimer, Warren W. Matthews, Michael P. McConahy, Patrick J. McKay, Gregory Miller, Nancy J. Nolan, Philip M. Pallenberg, Eric Smith, Michael Spaan, Trevor Stephens, Nelson Traverso, Michael L. Wolverton, and Mark I. Wood.

The Alaska Judicial Council asked bar members to evaluate the judges on six characteristics: *Legal Ability*, *Impartiality/Fairness*, *Integrity*, *Judicial Temperament*, *Diligence*, and *Overall*. The rating scale ranged from *Poor* (1) to *Excellent* (5).

Table 1 shows the mean ratings for each judge by respondents with direct professional experience on all six characteristics.

**Table 1**

Note: Ratings from only those respondents with direct professional experience with the judges.

# 2025 Judicial Pro Tem Survey

## *Introduction*

The Alaska Judicial Council evaluates the performance of retired pro tem judges every two years at the request of the Alaska Court System. The Chief Justice uses the Judicial Council's evaluations to determine eligibility for continued service as a retired judge pro tem pursuant to Administrative Rule 23(c). To gather information used to fulfill this purpose, the Council distributed surveys to Alaska Bar Association members and asked them to rate judges on six characteristics: *Legal Ability*, *Impartiality/Fairness*, *Integrity*, *Judicial Temperament*, *Diligence*, and *Overall*. Each survey also contained demographic questions about the respondents, including type of practice, length of Alaska practice, types of cases handled, primary location of practice, and gender.

To maintain objectivity, the Council contracted with the Institute of Social and Economic Research (ISER), a research workgroup at the University of Alaska Anchorage. ISER was responsible for all aspects of distribution and data collection related to the online version of the survey. Parallel paper surveys were printed and mailed by the Council but returned directly to ISER for processing, data entry, and analysis. ISER prepared this report summarizing survey procedures and results.

This survey was conducted among Alaska Bar Association members about the judicial performance of 21 retired pro tem judges. The 21 retired pro tem judges were (presented in alphabetical order): Eric A. Aarseth, Joel H. Bolger, William B. Carey, Robert L. Eastaugh, Dana Fabe, Natalie K. Finn, Donald D. Hopwood, Michael A. MacDonald, David Mannheimer, Warren W. Matthews, Michael P. McConahy, Patrick J. McKay, Gregory Miller, Nancy J. Nolan, Philip M. Pallenberg, Eric Smith, Michael Spaan, Trevor Stephens, Nelson Traverso, Michael L. Wolverton, and Mark I. Wood.

## *Methodology*

All active in-state members of the Alaska Bar Association were invited to participate in this pro tem evaluation survey. Inactive and retired members and active out-of-state members were also invited to participate in the survey if the Council had email addresses for them. Of the 3,773 individuals invited to participate, the vast majority of individuals (3,760) received only an email invitation to complete the survey online. One individual received only a paper version of the survey and 12 individuals received both the paper and online versions of the survey.

Respondents initiated 824 online surveys. No surveys were excluded because the respondent answered "No" to the question certifying that they had complied with the ethical standards set out in Professional Rule 8.2; 18 surveys were excluded because the respondents did not progress far enough in the survey to reach the certification question; 12 surveys were excluded because the respondents did not answer any other questions but the certification question. One online survey was returned by an individual who also completed a paper survey. The paper survey was more complete and was retained while the online survey was removed from analyses. Therefore, 793 online surveys qualified for analysis.

Respondents also returned five paper surveys. Attorneys are required to sign the paper surveys to verify that they are the person completing the survey. No paper surveys were excluded because they were unsigned. No paper surveys were excluded because the respondent did not respond to the question certifying that they had complied with the ethical standards set out in Professional Rule 8.2. One paper survey was returned by an individual who also completed the online survey. The paper survey was more complete and was retained while the online survey was removed from analyses. One paper survey was signed and returned without a printed name or address on the return envelope. The signature on that survey had no discernable letters, and the

respondent could not be identified. That survey was excluded from data entry and analysis. Therefore, four paper surveys qualified for analysis.

The final analysis included 793 online surveys and four paper surveys, for a total of 797 surveys and a survey return rate of 21.2%. Of the 797 returned surveys, 376 (47.2%) did not rate any of the 21 judges. 421 respondents evaluated one or more judges. Table 2 summarizes the demographic characteristics of the respondents.

**Table 2**  
**Respondent Characteristics**

	All Respondents		Respondents who Rated $\geq 1$ Judge	
	<i>n</i>	%	<i>n</i>	%
<b>All respondents</b>	<b>797</b>	<b>100</b>	<b>421</b>	<b>52.8</b>

Male	420	52.7	231	54.9
Female	362	45.4	183	43.5
Another identity	2	0.3	-	-

## ***Instrumentation***

The survey contained the names of the judges being evaluated, questions about demographic information for each respondent, six evaluation items for each judge, and space for respondents to provide additional comments regarding each judge. Both electronic and paper versions of the survey required a certification by the respondent that they had rated the judges truthfully as required by the bar's Professional Rule 8.2.

Respondents evaluated judges in six areas of performance included in the survey using a five-point Likert scale that ranged from Poor (1) to Excellent (5). Detailed descriptions of the meaning of each point on the Likert scale were provided for each of the performance areas.

Respondents evaluated judges in six areas of performance. Detailed instructions for each domain were provided:

- Legal Ability:* Please evaluate the judge's legal and factual analysis including the judge's knowledge of substantive law, evidence, and procedure, and the judge's writing clarity and precision.
- Impartiality/Fairness:* Please evaluate the judge's sense of basic fairness and justice and whether the judge treats all parties equally.
- Integrity:* Please evaluate whether the judge's conduct is free from impropriety or appearance of impropriety and whether the judge makes decisions without regard to possible public criticism.
- Judicial Temperament:* Please evaluate the judge's courtesy and freedom from arrogance and whether the judge manifests human understanding and compassion.
- Diligence:* Please evaluate whether the judge is prepared for court proceedings, works diligently, and is reasonably prompt in making decisions.
- Overall Evaluation:* Please provide your overall assessment of the judge's performance.

## ***Confidentiality and Data Safety***

The survey introduction included a statement from the Alaska Judicial Council that reassured respondents of the confidentiality of their responses. Confidentiality is also a paramount concern at ISER and translated into specific procedures related to data security. Because data such as those collected through the judicial evaluation survey are of a sensitive nature, ISER has rigorous procedures to protect data. Specifically, paper surveys are kept in a lockable file cabinet located in a secure data storage room. Data are kept locked at all times except when being used for data entry or related purposes. Organizational policies and procedures highlight the requirement for confidentiality and ensure that only staff involved with the project have access to the data. Online data and data that have been entered from paper surveys are maintained on a secure server.

## ***Assurance of Non-Duplicate Responding***

To ensure that as few duplicates or invalid surveys as possible were received, clear instructions were provided to potential paper survey respondents regarding how to handle the survey booklets:

*"A postage-paid business reply envelope is enclosed for the return of your completed evaluations. Place the completed survey inside the envelope marked "Confidential," and seal the envelope. Then use the business reply envelope, being sure to sign in the space provided. The return envelope MUST BE SIGNED in order for your survey to be counted."*

Based on these instructions, ISER implemented procedures to ensure that only one survey was counted for each respondent. For the surveys returned without a name on the outside envelope, the envelope was opened to ascertain whether the individual signed the comment section. One paper survey was signed and returned without a printed name or address on the return envelope. The signature on this survey had no discernable letters, and the respondent could not be identified. That survey was excluded from data entry and analysis and was not

reflected in the total number of valid surveys received. Signed names on the envelopes were compared to the mailing list, ensuring the individual was an eligible participant. Each individual's unique identifier was entered with the data, providing the ability to check for duplication with the completed online surveys. No surveys were signed by individuals who were not on the mailing list.

For the online data collection, each potential respondent was provided with a unique URL that could only be used once, and only accessed from the e-mail address to which it was sent. After merging online and entered paper data, ISER analyzed frequencies of the unique identifier variable to identify any duplicate responses. One duplicate survey was identified. The most complete survey data (the paper survey) was retained and the duplicate (online survey) removed, ensuring that only one survey per respondent was used in the data analysis.

### ***Data Management***

With the goal of virtually error-free data handling, ISER implemented rigorous data entry procedures to ensure the accuracy of data entry. Paper data was entered using an electronic system similar to the online survey that prevents out-of-range responses. After the paper surveys were entered, a second staff member verified all entries and corrected any mistakes, using paper data as verification. Online data were downloaded from the survey website and imported into SPSS for analysis. The paper survey responses were merged with the online responses in SPSS to create one data file of all responses.

### ***Results***

Two sets of results are presented in this section of the report. First, respondents' level of experience with each judge is shown. Then, a summary table presents the ratings and comparisons of the judges. Many of the cross tabulations yield results based on small numbers of respondents. Results based on small numbers of respondents should be regarded with caution and more weight given to the overall results.

#### ***Respondents' Level of Experience with Each Judge***

All respondents were asked to describe the basis of their evaluation for each judge they rated, with options of direct professional experience, professional reputation, and other personal contacts.

Table 3 shows the type of experience of respondents for each judge.

#### ***Ratings of Judges***

In the tables that follow, responses to the rating questions are shown in a variety of ways. Most tables show the number of respondents (*n*) and the average rating (*M*). Tables 4-10 present detail on the *Overall* item. Table 4 compares all judge ratings to those from respondents with direct professional experience and includes the median rating (*Mdn*) and the standard deviation (*SD*) in addition to number of respondents and average. Tables 5-10 present data only from those respondents who indicated direct professional experience. Table 5 provides the distribution of responses on the *Overall* item. Table 6 provides judges' mean scores broken down by respondents' type of practice. Table 7 provides judges' mean scores broken down by respondents' length of Alaska practice. Table 8 provides judges' mean scores broken down by respondents' type of caseload handled. Table 9 provides judges' mean scores broken down by location of practice. Table 10 provides judges' mean scores broken down by respondents' gender.

For each individual judge, Tables 11-52 provide a demographics summary of respondents and detailed information on ratings provided by respondent characteristic.
